

`seminar.sty`
is a LaTeX style
for typesetting slides
or transparencies, and
accompanying notes. Here are
some of its special features: It is
compatible with AmS-LaTeX, and you
can use PostScript and AmS fonts. Slides can
be landscape and portrait. There is support for
color and frames. The magnification can be changed
easily. Overlays can be produced from a single slide
environment. Accompanying notes, such as
the text of a presentation, can be put outside
the slide environments. The slides, notes or
both together can then be typeset in a variety
of formats.
