

`seminar.sty`  
is a LaTeX style  
for typesetting slides  
or transparencies, and ac-  
companying notes. Here are  
some of its special features: It is  
compatible with AmS-LaTeX, and you  
can use PostScript and AmS fonts. Slides can  
be landscape and portrait. There is support for  
color and frames. The magnification can be changed  
easily. Overlays can be produced from a single slide envi-  
ronment. Accompanying notes, such as the  
text of a presentation, can be put outside the  
slide environments. The slides, notes or both  
together can then be typeset in a variety of for-  
mats.
